DETAILED ACTION

Allowable Subject Matter

Claims 2-4, 6-8, 11-30 are allowed.

The following is an examiner's statement of reasons for allowance:

Referring to claim 30, the Cooper et al (US Patent 5333200) discloses a method for processing an electric sound signal wherein a right sound signal and a left sound signal are diffused in an environment by two speakers (Cooper et al. col. 23, lines 6-22) and are detected by an acoustic detector comprising a right microphone and a left microphone (Cooper et al. fig. 1b: 143 & 145), the method comprising: computing a first temporal filter corresponding to a detection by the right microphone of the right sound signal (Cooper et al. fig. 1b: 132, 134, 136, 138: is inherent that a filter can calculate the transfer function); computing a second temporal filter corresponding to a detection by the left microphone of the right sound signal (Cooper et al. fig. 1b: 132, 134, 136, 138: is inherent that a filter can calculate the transfer function); computing a third temporal filter corresponding to a detection by the left microphone of the left sound signal Cooper et al. fig. 1b: 132, 134, 136, 138: is inherent that a filter can calculate the transfer function); computing a fourth temporal filter corresponding to a detection by the right microphone of the left sound signal (Cooper et al. fig. 1b: 132, 134, 136, 138: is inherent that a filter can calculate the transfer function); modifying each of the temporal filters by an operation including at least one of: normalizing the temporal filters on a maximum of a direct field or on a quadratic average, temporal resetting of the temporal filters in relation to each other, providing a time lag of samples from a temporal filter (Cooper et

al. col. 9, lines 37-49), masking of at least some of the samples from the temporal filter, and altering an amplitude of at least some of the samples from a temporal filter (*Cooper et al. col. 19, line 59 through col. 20, line 14*). The Cooper et al reference taken alone or in combination with another reference does not disclose or fairly suggest computing the four temporal filters representing acoustic transformation applied to the respective sound signals by the **reflective environment** between the speaker and the microphone; applying the modified temporal filters to a right original sound signal and a left original sound signal to obtain processed electric sound signals by: applying a first modified temporal filter to the right original electric sound signal to obtain a first processed electric sound signal, applying a second modified temporal filter to the right original electric sound signal to obtain a second processed electric sound signal, applying a third modified temporal filter to the left original sound signal to obtain a third processed electric sound signal, and applying a fourth modified temporal filter to the left original sound signal to obtain a fourth processed electric sound signal, adding the first and fourth processed electric sound signals and the right original sound signal to obtain a right processed electric sound signal; adding the second and third processed electric sound signals and the left original sound signal to obtain a left processed electric sound signal; and diffusing the right processed electric sound signal and the left processed sound signal as recited in claim 30.

Claims 2-4, 6-8 & 11-29 depend on claim 30.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
